OnStageXPro Instructions

Setlist Edit Mode

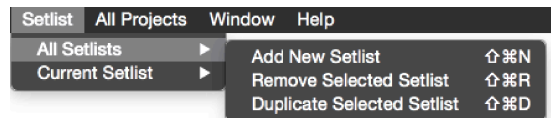

Setlists

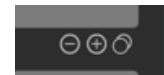

Double click to rename your Setlists

Use menu items or Setlist buttons to remove, add or duplicate your Setlists.

Setlist Menu

Setlist Buttons

All Projects

Drag and drop Logic Projects into All Projects.
Program Change messages will be assigned automatically.

Double click to globally reassign Program Change messages associated with each Project.

You will be alerted if the PC message is already assigned to another Project.

Use menu items or All Project button to delete selected Project from all Setlists, or delete All Projects.

All Projects Menu

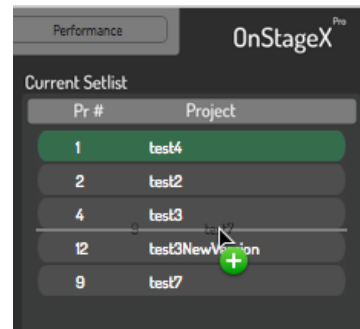

The All Projects search box will help find specific Projects

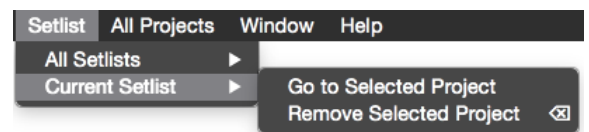

All Projects Button sand Search Box

Current Setlist

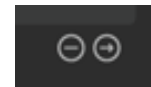

Drag Projects from All Projects to create your Setlists. Projects can then be moved to edit each Setlist.

Use menu items or Current Setlist buttons to remove Projects from your Current Setlist, or go to the selected Project.

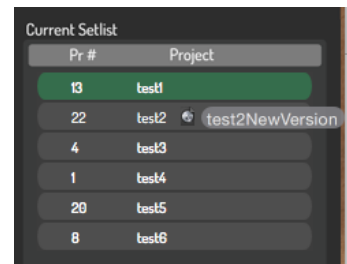

Current Setlist Menu

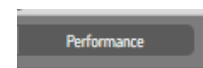

Current Setlist Buttons

Drag Projects directly from Finder onto your Current Setlist to Globally reassign the associated Logic File across all Setlists.

Performance Mode

The current Setlist is locked and ready for performance.

Use the keyboard right arrow key in addition to the up/down arrow buttons to launch the Selected project.

Please Note: If using an external MIDI device, specific Program Change messages can be sent in on the selected MIDI port to launch the corresponding Project in the current Setlist. This is in addition to next song auto-load via the Virtual MIDI Port.

Preferences

Ensure the 'Use Virtual Port' box is ticked for the 'OnStageX Pro Virtual Port' to appear as a MIDI destination in Logic Pro X.

Use Program Change 127 at the end of each song for next song auto-load. The App 'active' switch allows selection of the correct Virtual Port without changing Projects.
